Bay Delta Conservation Plan Report, revised

mailed-by

gmail.com

To: Bay Conservation and Development Commission, and all responsible review bodies/agencies

From: Lesley Emmington Jones

February 1, 2012

Re: Bay Delta Conservation Plan, revised

It has come to my attention that the approximately 3,000 page revised report Bay Delta Conservation Plan Report (consultant URS) fails to include analysis of critical properties of significance that effect the general health of the Suisun Marsh and Bay Delta lands, including: Tonnesen Pet Cemetery and new Solid Waste Permit, Solano Garbage Company, Access Road to Potrero Hills Land Fill and new Phase I Composting Permit Parcels affecting Spring Creek, the Lambert Property 70 acres, the June Guidotti Property 152 acres, the Dick Pery Property 300 acres, the Maria Alice Rivers Property 150 acres, the Jeff Dittmer Property of some 100s and 100s of acres, and Emmington Road.

I urge that your agency acknowledge this important oversight in the Report and that review and discussion not proceed further until the Report is complete so as to include these significant lands existing within the Suisun Marsh Protection area.

Thank you for your attention given to this matter,

Lesley Emmington Jones

Delta Conservancy plans Solano workshop

By Barry Lammiman
 DAILY REPUBLIC

SUSUN CITY—A new state agency designed to help restore habitat in the Sacramento-San Joaquin Delta and Suisun Marsh wants to hear ideas from Solano County residents.

The Delta Conservancy is putting together a strategic plan. It is holding workshops in the five counties that contain part of the Delta.

A Solano County workshop is scheduled from 3:30 to 5:30 p.m. Wednesday at the Kusch Ranch preserve, 6521 Grizzly Island Road in Suisun Marsh south of Suisun City.

If a traveler impor-

tant to us that Delta residents let us know what they want and need as the conservancy forms how it will pursue its mandates over the next five to 10 years.

The direction the conservancy takes has significance for Solano County because the state has targeted the rural eastern county near Rio Vista for many of these restoration projects, as well as Suisun Marsh. County officials have expressed concern that habitat restoration projects might take farmland out of production and increase flooding risks.

The Delta is about 738,000 acres that contains small communities and farms, as well as wetlands and sloughs that are home to various rare species such as the Delta smelt. Federal and state projects pump Delta water into canals for delivery to some 2.5 million Californians and to Central Valley farms.

California is trying to find ways to keep water supplies flowing to cities and farms while also restoring the troubled Delta ecosystem and complying with laws protecting endangered species. That led to Delta plans being crafted by the Delta Stewardship Council and a

variety of other efforts, including formation of the Delta Conservancy.

The Delta Conservancy in its interim strategic plan describes itself as the "primary state agency to implement ecosystem restoration in the Delta in collaboration and cooperation with local governments and interested parties." It also lists its mission as preserving Delta agriculture.

"We need to make sure we have a balance between protecting our jobs and our agricultural economy," said former Rio Vista Mayor Eddie Wordruff, who is on the conservancy's Board of Directors.

Executive Director Steve Chappell is a liaison giving Delta residents an adviser to the board which holds a vote but no regulatory authority. Chappell said he believes the conservancy will have a very strong view of the Delta, rather than a narrow focus on a particular issue. Chappell said that like the Delta Protection Commission, the conservancy will be an organization that can bring local, state and federal agencies together. One challenge for the conservancy is that it will be a state agency, not a local government. Chappell said that like the Delta Protection Commission, the conservancy will be an organization that can bring local, state and federal agencies together. One challenge for the conservancy is that it will be a state agency, not a local government.

Wordruff as a conservancy board member will have a vote in the habitat restoration efforts and the direction of the conservancy. Suisun Conservancy District

1-31-12

Hi June

I wanted to drop you this note to let you know that I received your faxes and have forwarded them on to the folks that are preparing the Bay Delta Conservation Plan (BDCP) and the BDCP EIR/EIS.

You should know that my role in the project is to help with outreach and communication and I am not involved in the technical preparation of any of the documents associated with the BDCP. Though I am happy to forward your correspondence to the appropriate technical staff, and make our previous conversations known to them as well, we are not really equipped here to do this on an on-going bases. I am also concerned that your ideas and concerns be communicated directly to the appropriate people the most efficient way possible to avoid the possibility of your message somehow not being conveyed as you intend.

Finally, while the BDCP may be broad in its scope, it may not deal directly with all the issues you have raised to date. Issues of tidal action in Suisun Marsh are certainly something that the BDCP will want to consider, however there are other items like the operation of the landfill and the pet cemetery, which on the surface may have water quality impacts, sound to me to be more local in nature. My primary concern is that you are plugged into the process that is likely to provide you with the best results. The BDCP is a planning level document that will take years if not decades to implement, and it appears to me that some of your concerns are more immediate. The Bay Conservation and Development Commission, a forum I believe you already familiar with, is more likely to respond to your current set of needs than the BDCP. Though that is speculation on my part.

Let me know if you require any additional information.

Thanks.

John

SUMMARY OF WRITTEN COMMENTS ON THE PROPOSED WESTERN SUISUN MARSH SALINITY CONTROL PROJECT

DIVIDUALS

Paul W. Crapuchettes (10/31/89)

With regard to the proposed project, recommends that:

1. Alternatives to actions proposed in the Plan of Protection be considered in the EIS/EIR.
2. Facilities to service Grizzly Island should be constructed next.
3. The Tree Slough alternative to the Grizzly Island Distribution System should be evaluated.
4. Relative impacts of flow improvement in Cutoff Slough versus the Potrero Hills Ditch alternative should be assessed.
5. Cutoff Slough and Frank Horan Slough alternatives should be considered.
6. A sheet piling barrier from the Tip End Club 4000 feet into Grizzly Bay should be considered.

3. Fred Tomasini (12/12/90)

With regard to the proposed northern alignment for the Boynton-Cordelia Ditch, the following should be considered:

1. The Suisun Marsh Hunting Preserve's operations and income would be irreparably harmed.
2. Increased public access to the hunting area would be unsafe for the public and hunters, and would require increased liability insurance and a safety buffer zone along the ditch.
3. Any interruption of flow in the Reclamation District 2034 ditch would obstruct or prevent irrigation of adjacent lands required during the summer.

Favors the southern alignment for the Boynton-Cordelia Ditch because it would diminish the stated impacts.

14. June Bonnici (12/27/90) AKA Gaudette

With respect to proposed marsh facilities, and in particular, the future assessment of the Potrero Hills Ditch, recommends that the following be considered:

1. Drainage problems and floodflow drainage.
2. Impacts on tidal action upstream of the project.
3. The extent of easements around proposed facilities and associated features such as bridges.
4. Increased public access.

RECEIVED

Solano County
Environmental Management

APR 17 2013

AM 7, 8, 9, 10, 11, 12, 1, 2, 3, 4, 5, 6 PM

5. Potential water fees for water flowing through proposed facilities.

6. Identify the involvement of BCDC and DFG.

7. Impacts on existing infrastructure, such as, electrical lines, roads, etc.

75. James R. Bancroft (1/2/91)

In response to SRCD's notice to Marsh landowners regarding the proposed project, Mr. Bancroft and Joice Island landowners look forward to any successful effort to improve water quality in Suisun Slough.

76. Stacy R. Mettler, M.D. (1/3/91)

With respect to the proposed project, is concerned of possible adverse impacts on water quality and other aspects related to duck hunting at the Cordelia Gun Club.

77. Paul Erman - Pierce Harbor (1/10/91)

In a telephone conversation with Michael Lewis, SRCD manager, expressed concern that Goodyear Slough water quality is currently adversely impacted by the operation of the Morrow Island Distribution System and the Goodyear Slough Outfall. Future facilities should not compound these problems.

78. William L. Frost (1/11/91)

With regard to the proposed projects for the northwestern Suisun Marsh, is concerned that water originating from Suisun Slough will be more brackish than the existing channel water.

Proposed an alternative of partially restricting flow through the west end of Montezuma Slough with rip rap to allow less Grizzly Bay water from entering the Marsh.

79. Tom Cundith (2/12/91)

With regard to the use of Cat and Volanti sloughs to transfer water from Montezuma Slough near Beldons Landing to Suisun Slough, the following concerns should be considered:

1. Natural channels and coves would be blocked from Cat and Volanti sloughs.
2. Actual and effective wetland acreage would be reduced.
3. Wetland vegetation, invertebrate and young fish habitat would be destroyed.
4. Existing water management on adjacent duck clubs would require alteration.
5. Waterfowl use and flight patterns of the adjacent Joice Island sanctuary and private duck clubs would be altered.
6. Historical duck boat access to duck club ponds/blinds via Cat and Volanti sloughs would be impossible.
7. Increased public/agency traffic in the area would be harmful.
8. Productivity and value of adjacent private wetlands would decline.

73 (continued)

Page 2 -
Mr. Dwight P. Russell
California Department of Water Resources
December 13, 1990

2. Public access to this publicly financed structure will be completely out of our control. Undoubtedly, the public will be there. This creates an extremely dangerous situation both to the public and to my members. At present, our hunters are screened as to their knowledge of guns, hunting and safety procedures. Liability insurance is both difficult and costly to obtain. A loss of liability insurance due to a rash of accidents would force me to abandon this recreational facility. I estimate at least 134 acres would be required to establish an effective safety buffer zone.
3. Failure to promote habitat through irrigation during the summer months translates into a poor ratio during the September through March hunting season. Our present source of water for the land along this corridor is the existing RD 2034 ditch. Any interruption in this source during the summer months would be extremely damaging.

Recreation has become an increasingly important socio-economic factor in today's society. There is limited marginal land available so close to the centers of population for this type of enterprise. Although the alternate route to the south will present similar problems, they would not have the severe impact of the original route and could be dealt with. Therefore I must adamantly oppose the original proposal and favor the alternate to the south.

Thank you for your consideration.

Sincerely,

Paul J. Bonnici

December 27, 1990

To: Solano Marsh Technical Advisory Committee Members

From: Jure Bonnici
2963 Santa Rosa Avenue, Space B7
Santa Rosa, CA 95407

Subject: Public Scoping Session, December 13, 1990 at Supervisor's Chambers,
Solano County Courthouse, Fairfield, California. (On the Western Marsh
Salinity Control Project, Boynton-Cordella Ditch, Fournier Hills Ditch, 12
acre lake.)

Attention: Mr. Dwight P. Russell
Kanyar Givvelich

Technical meeting 12-27-90. I would like my concerns added to the minutes because I am unable again to be able to attend today's meeting because I have had to resort to litigation to protect my parcel from salt water and water draining into the marsh.

My concerns at this time are:

- 1) The Potrero Hills ditch and the 12 acre lake at Hill dough concern me. How will you handle the drainage problem between Emmington Kildner and Scully Road.
- 2) My concern is that my parcel is under tidal action above the 10 foot contour line, and this ditch is going below the 10 foot contour line.
- 3) My concern is the 100 foot at this point.

74 (continued)

- 14) I am concerned about the speed limit and that there is no one to police the Potrero Hills. What will you do about this?
- 15) Where is Fish and Game and BDC? It concerns me that the laws of the Suisun Marsh be protected.
- 16) I'm concerned about what Solano County is putting the Waste to Energy Recovery Plant. Is it going into the Potrero Hills? I do not want the bridge put where the pipeline to Travis Air Force Base was supposed to go. How will this be handled?
- 17) My concern is about how all this is going to work. We need food, electricity, fuel, the garbage company, agriculture, the wildlife and the marsh, wetlands and possibly shipping of fuel in time of war. We rely on seasonal fresh water.
- 18) When you put in the handicapped way stop, I would like to see a cement ramp installed that leads down to the water.
- 19) I'm concerned about the PG&E electric line in the marsh. How will this be handled?
- 20) I'm concerned about groups who want to use and control other people's property to enhance their jobs, their sports and pleasures and leaving the real owners only one civil right, that of paying confiscating taxes. Will you protect us and our land and water, or must we resort to litigation and the courts?

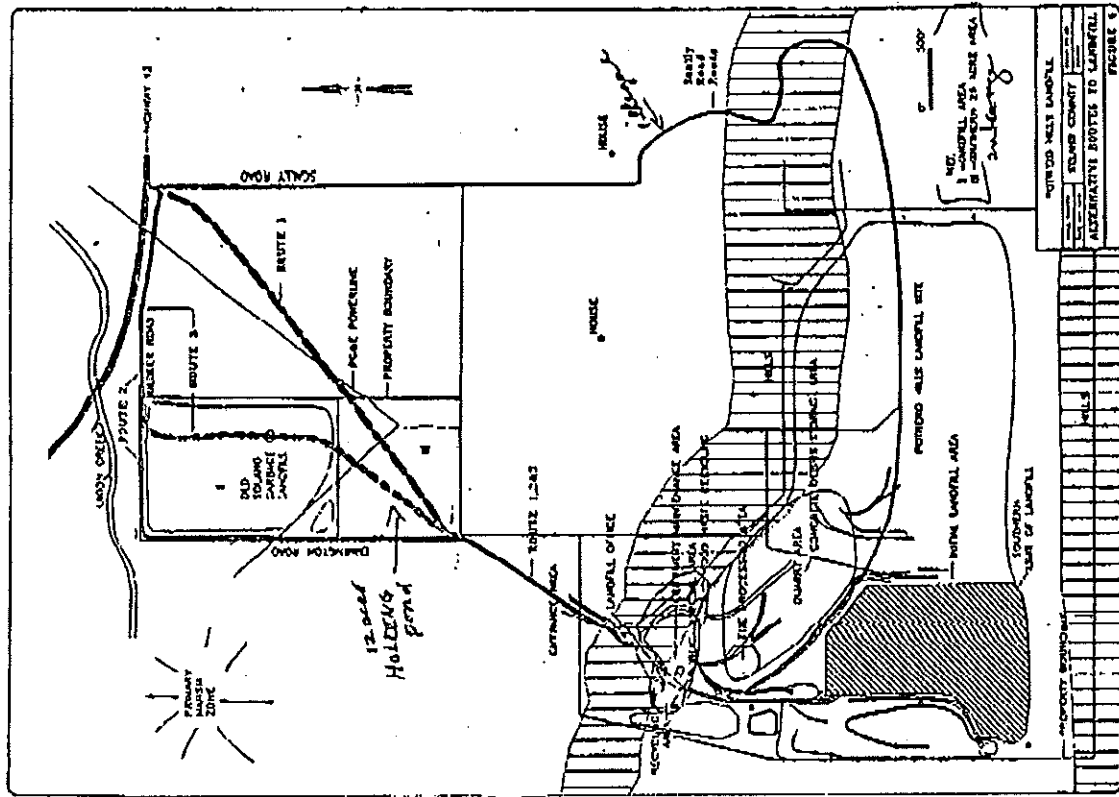

Thank you for allowing the above to be added to the minutes of this meeting.

Gina Bonnicci Family
 Gina Bonnicci
 Alka Giacchetti

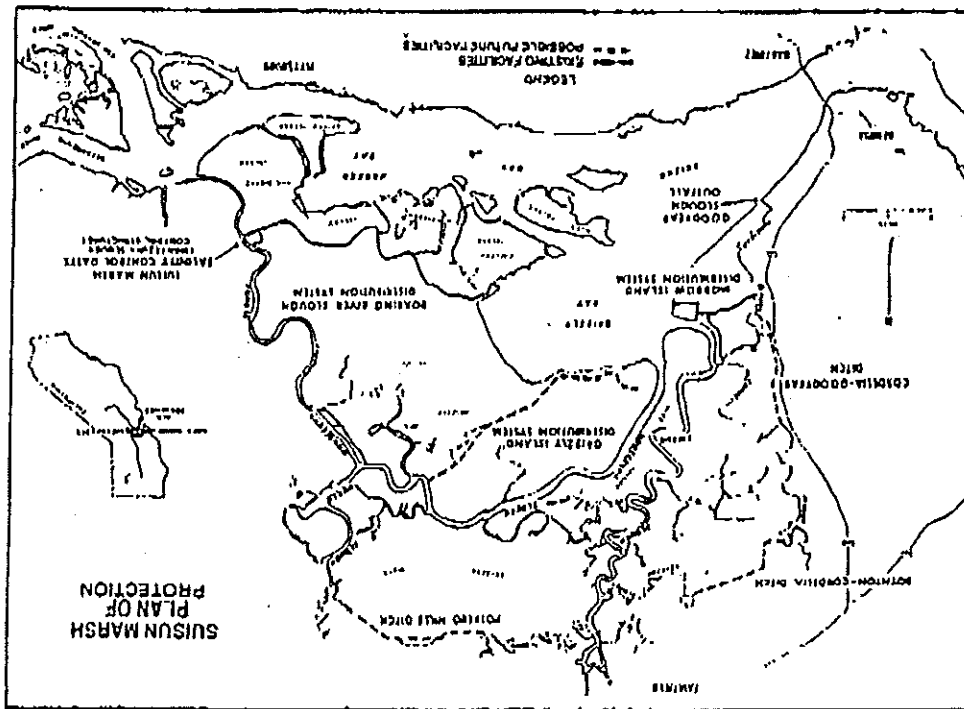

74 (continued)

- 4) I'm concerned about where you are going to put the bridge across the 90 foot channel. The bridge is 164 feet wide. How much easement will be needed to allow for the bridge?
- 5) Public access to the Potrero Hills is a concern.
- 6) Will the ranchers be able to use the water out of the ditch for irrigation for farming, and produce agriculture for the needs of the people.
- 7) It concerns me that we will be charged a large amount for the water if we will be able to do this.
- 8) My concern is that agriculture continue for the needs of the people, that shipping if needed be allowed, like during World War II. The Rush Ranch was planted in grain, which was shipped from a warehouse at Rush landing. This is and was, agriculture providing for the needs of the people.
- 9) It concerns me that the farmers and ranchers rights be protected for producing cattle, sheep, horses from the farmers of the duck hunters and Empire builders.
- 10) My concern is that this ditch will only be for the garbage company to haul their garbage up to the landfill in the Potrero Hills, and for the 200 privately owned duck clubs.
- 11) My concern is that the governor again has given all this money for just the rich, and the duck clubs.
- 12) Going back to the garbage being shipped up the ditch from San Francisco and Contra Costa, maybe this should be considered if the shipping can be done quickly and if the garbage is covered. The garbage trucks and vans are making too much impact on the wetlands and wildlife due to the importation of all garbage to this area. The garbage trucks are noisy, smelly, and are leaking.
- 13) My concern is that Easter is one of the best times in the marsh. It's important that the baby ducks make it to the slough or the Potrero Hills ditch. The garbage trucks and vans run them over and throw dust on the nesting birds.

Solano Cty. CAO

December 15, 2003

Ms. June Guidotti
3703 Scally Road
Suisun, CA 94585

Dear Ms. Guidotti:

I appreciated the opportunity to meet with you on October 29, 2003 to discuss past flooding on your property located at 3703 Scally Road. The area in question is outside State right of way bounded by Kildeer Road and Potrero Hills Lane. Both of these roadways are Solano County facilities.

I agree with you that the extent of flooding as evidenced by the pictures you provided is most likely exacerbated by the small culvert beneath Potrero Hills Lane which currently acts as access to the Potrero Hills Landfill. This raised roadway essentially acts as a dam and has significantly reduced the natural tidal circulation from Hill Slough onto your property. Additionally, coincident with high tides and storm events, the raised roadway and culvert appear to restrict the runoff from your property back to Hill Slough. In my opinion, the portion of Potrero Hills Lane which crosses the historic tidal marsh should have been placed on a bridge. ←

Caltrans doesn't own, operate, or maintain the culvert beneath Potrero Hills Lane, therefore, we have no obligation or authority to address your flooding problem. If you have any questions regarding this issue please contact me at (510) 286-6377.

Sincerely,

Re: Public Notice #20527N Comments

Dear Colonel:

The Solano County Water Agency has been looking at wide spread flooding in Solano County. On behalf of Mrs. June Guidotti, adjoining land owner to the proposed project parcel of Larry Birch Solano Garbage Company, Inc./Potrero Hills Landfill, Inc., the Solano County Water Agency would like to submit the following comments for review prior to issuance of the final corps permit.

I. Review the contours and areas affected by the construction of a berm at the 4' elevation (figure 3 Public Notice 20527N). The construction of this berm may back water onto land owners other than those requesting the corps permit. Any landowners negatively impacted should be notified that their lands may be unusable as a result of the issuance of the corps permit.

II. Additionally, flooding is significant during normal rainfall events. Scally Road can go under 2-3 feet of water and becomes impassable. Please review the permit and confirm that the natural drainage pre-project has not been altered. Currently there is a flap gate at Emmington Road, this should be removed as proposed in the application. This will re-establish the natural drainage that existed prior to the construction of existing roads.

Our recommendation would be to review the permit request in order that drainage problems are not exacerbated along Scally Road any more than natural existing conditions permit. Drainage/flooding problems along Scally Road may have existed prior to the installation of Emmington or Potrero Hills Landfill roads, but certainly not to the extent of recent flooding. Please see to it that any enhancements made in this permit minimize flooding and drainage problems.

If you should have any additional questions or concerns, please call David Okita at 707-451-2904 or Jim van Lobben Sels at 707-451-2852.

Sincerely,

Jim van Lobben Sels

Solano County Planning Commission
675 Texas Street
Fairfield, CA 94533RE: Study Session on the General Plan
and Zoning amendments to Suisun Marsh LPP

Gentlemen:

On behalf of June Guidotti and her family, we object strongly to major modifications of the Marsh Protection Plan without CEQA compliance. There are no environmental studies supporting these major changes to previously approved projects.

We believe that these modifications are merely to "bootstrap" the expansion of the Potrero Hills Landfill in violation of Solano County Measure "E". It appears to us that the non-transferable permit issued to Solano Garbage Company has been transferred by Potrero Hill Landfill. How can this be?

Mrs. Guidotti requests Resource Management to supply her with copies of all deeds that affect her easement and cattle right of way on and across Emmington Road, Kildeer Rd., Scally Road and the access road to Potrero Hill Landfill. She further requests copies of any and all maintenance agreements regarding roads that abut her property. Emmington Road was always her main access to her property. See proposed Land Use Regulations, Chapter 28, Art. III, pages 33 item 8, 29 item 8, 25 item 8.

Changes in zoning regarding the wind turbines will seriously affect the Pacific Flyway, the Suisun Marsh, California Water Fowl, the wetlands that create health for the San Francisco Bay Delta and may indeed be deleterious to national security. The National Defense Authorization Act signed in January seems to prohibit this use.

We are informed and believe that information is being transmitted between members and not subject to public review in violation of the Brown Act. See Gov't Code § 54950.

Zoning, Cattle Right-of-way Easement, and land use changes denigrate my clients and amounts to an unlawful taking of their vested property rights. Nowhere on the documents you are now considering can be found Mrs. Guidotti's long planned waste to energy plant. We reserve the right to supplement or amend these requests.

Sincerely,

WILLIAM S. REUSTLE

To: Robert Issac
Solano Irrigation District
508 Elmira Road
Vacaville, CA 95687

COUNTY OF SOLANO
RESOURCE MANAGEMENT

From: June Bonnici
3703 Scally Road
Suisun, CA 94585

RE: The city of Suisun's three million gallon water tank in the Potrero Hills
for the need of the people and the right for water.

Dear Mr. Issac:

In March of 1992, I contacted your office stating that I would give an easement through my property for the Emergency Water supply for the city of Suisun, and my offer was rejected. In November of this year, I called your office to speak with you and Darrell Rosenkild and your secretary returned my call. I was told you will **not** put the water tank in the Potrero Hills, where it was proposed in the General Plans because you are planning to put the water tank at the Sport Club.

I visited your office last week and spoke with Frank Weber. As per Frank Weber, I am again asking the Special District for the three million gallon water tank to be put in the proposed site in the Potrero Hills. I am asking for one hundred thousand gallons of water a day for the need of the people and the right for water for the city of Suisun's three million gallon emergency water tank to be put in the proposed Potrero Hills site in the Brocco-Guidotti road easement.

In the EIR, I proposed to construct a waste-to-energy facility on the Brocco-Guidotti Ranch. This proposal is feasible, as per the Marsh Laws, and can be put in for long-term agricultural use; for a cogeneration facility and small power production, which I plan on producing a high protein sheep feed. The plant I am proposing would take one hundred thousand gallons of water a day. The facility would pipe methane gas and electric power to Travis Air Force Base for protection of the Base.

In the Marsh Laws, the agricultural policies of the local protection program component states that (a) agricultural uses consistent with the protection of the Marsh such as grazing and grain production should be maintained in the secondary management area, which you are already aware of due to the October 19, 1990 letter BCDC sent to your attorney for SID.

The tank would have a capacity of four million gallons. This facility would be designed to serve the forecasted future domestic needs of Suisun City.

The money to do this would come from the Nine Cities. The County of Solano and the Potrero Hills Landfill and the Solano Garbage Company need a road easement to import their garbage to the Canyon, and as of November 1993, they were told to take their illegal road out.

Prepared by the County of Solano, the Draft EIR for the Solano Garbage Company Landfill Marsh Development Permit Application #MS-90-01 and MD-91-01 Chapter 3 project description, (6) Solano Irrigation facilities expansion plan indicates plans to develop an underground pipeline along Scally Road.

I am asking you to please reconsider your response on placing the three million gallon water tank in the proposed Brocco-Guidotti easement for the above reasons and because of the degrading value of my water. I will be awaiting your written response. Thank you for your time.

Sincerely,

June Bonnici & Family

ANAEROBIC

RE: General Plan Update

Dear Mr. Harry L. Englebright & Citizens Advisory Committee (CAC):

June Guidotti (Bonnici) has used her property for the agricultural grazing of sheep and cows. Her future plans are to continue this practice.

In addition, she proposes to construct a research project the study the production and quality value of feed grains produced from an acerbic and/or pyrolysis system. Feedstock to be considered in the project are sugar beets, green waste, corn, wheat, cannery waste, brewery waste, and other available by-product or agricultural product sources. It is estimated that the research project would be sited on approximately 20 acres.

In 1993, she proposed to site a Waste To Energy (WTE) plant on her property. **See Solano Garbage Company Landfill Environmental Impact Report dated January 1993, Page 3-27 (5) Bonnici Project. A portion of the reserved project will also involve the production of energy from waste by-products. This project is similar to what UC Davis is presently using.

Her property has been in her family for 5 generations. It is safe to say that her property is, and should be, considered "grandfathered" in all aspects regarding agricultural, land use, water, and no limits should be placed on this parcel. Her property is located in the buffer zone as outlined in the Suisun Marsh, as adopted by the State Legislature.

The permits, "Certification of Qualifying Status of a Small Power Production Facility" (18 C.F.R. §381.505(a); and, "Certification of Qualify Status as a Cogeneration Facility" (18 C.F.R. §381.505(a) Ms. Guidotti is seeking may not be necessary because of research.

She requests that her land use be accordingly revised so that there will be no restrictions on her anticipated activities.

Sincerely,

WILLIAM S. REUSTLE

Solano County Resource Management
Attn: Narcisa Untal

RE: Countywide Siting Element

Gentlemen:

On behalf of Mrs. June Guidotti, a Solano County resident with substantial property in the Suisun Marsh buffer zone. My client is deeply concerned about the proposed changes in the Countywide Siting Element.

It is noted that the Figure IV-2 was referenced on pages 11 and 15 but that figure was not included in the package as disseminated. The triangle was shown on the Griffith Ranch (representing a solid waste facility) whereas it should be indicated near the flare on the phase one PHL site.

Mrs. Guidotti requests that her proposed thermal electric transformation plant as proposed be included in the new siting element as previously requested in public hearing on June 17, 2010. It is contended that this plant is of greater merit than any other proposed plants, ie. Solano Garbage Co., Potrero Hills, Tonnesen. Environmental considerations promote the conversion project as a way to efficiently eliminate much of the materials that otherwise simply adds bulk to the land-fill. This problem can be minimized by converting biomass to electrical energy, a very 'green' concept. Mrs. Guidotti would entertain locating a test facility on her lands to scientifically determine the feasibility of such operations.

Objection is hereby made as to permitting of the Tonnesen Pet Cemetery. This project was allowed to proceed in violation of existing requirements based on a faulty LEA Advisory No. 12. That advisory was rescinded in 2004. Thereafter the facility has operated sans permit in what can only be described as an illegal operation. Suisun Marsh must be protected and this operation has the potential to denigrate water quality and to contaminate marsh lands with runoff. My client is concerned that any contemplated changes to the Tonnesen operation could allow an expansion of activities, including incineration, contrary to the original 'permit' and the Marsh Protection Plan. If the operation is transferred to the ten-foot contour line, as shown on Figure VI-1, further damages are likely to the Suisun Marsh and surrounding lands. Leakage from the site is not adequately monitored for temperature or water quality or soil contamination. CEQA

requirements have not been met. There is no EIR. Furthermore, page 23, Chapter 5 of the Preliminary draft specifies that "new or expanded solid waste disposal sites shall be located further than 10,000 feet from airport runways" Mrs. Guidotti questions the location of the Tonnesen facility as being too close to the Travis AFB runway.

Recent events affect seriously the need for some of the proposed changes. The May 12, 2010, court decision that Measure E *must* be enforced by the county has a major effect on the Potrero Hills Landfill. The siting plan document assumes approval of the PHL expansion which is very much in doubt. No new roads should be allowed, even calling them 'fire roads' does not abrogate the need to maintain the Marsh in a pristine state.

A study should be undertaken to fully explore the alternatives before locking in a Plan that does not address my client's vested rights or the best interests of the public. Attached hereto is a copy of a portion of the official Solano County map showing the Guidotti property designated as a solid waste facility.

Mrs. Guidotti reserves the right to amend or supplement the public record on these matters.

Sincerely,

WILLIAM S. REUSTLE

Dear Frank:

I contacted BCDC concerning the Bonnici property to determine whether it is within their jurisdiction.

It is not, however he points out that the site is within the "buffer zone" as outlined in the Suisun Marsh legislation adopted by the State Legislature. I am enclosing a copy of Alan Pendleton's letter.

As you know, as a member of the Solid Waste Study Committee, that area is to be a major waste disposal area. I believe it can be worked out.

Sincerely yours,

F. R. HENREKIN

Local Task Force for Integrated Waste Management
675 Texas Street, 5th Floor
Fairfield, CA 94533

RE: June Guidotti facility

Dear Chairperson Bogner:

We note that the task force Siting Element has once again neglected to include June Guidotti's proposed waste to energy conversion facility. This is unfortunate.

You should be aware that Ms. Guidotti applied on August 24, 2007, for a permit for a research study to be sited on her property adjacent to the Potrero Hills Landfill. This site was a *required element* included and identified in the permit process for Solano Garbage Company as long ago as 1984. Although Solano Garbage never followed through with that requirement once their permit was granted. I refer you to Solano Garbage Company Landfill EIR dated January, 1993, Page 3-27 (5) Bonnici Project which is attached hereto for your convenience. Now that Solano Garbage Company's name is being removed from the paperwork designations it is imperative that June Guidotti's portion should not simply perish as well. This is still a viable project that should be allowed to go forward as an environmental improvement to the entire area.

Please see to it that this project is included in the Countywide Integrated Waste Management Plan. If there are any other requirements that should be followed up, please so advise.

Further, please see to it that June Guidotti at 3703 Scally Road, Suisun, CA 94585 is included in the mailing list for all LTF activities, meetings, and actions as she desires to follow through on the activities that affect her property and property value.

Sincerely,

WILLIAM S. REUSTLE

RE: Agenda #38 Public Hearing to further consider certification of the Final Environmental Impact Report for the Potrero Hills Landfill Expansion Project and approval of modifications to Use Permit No. U-88-33 (Revision No. 2) for the Potrero Hills Landfill Expansion Project

Dear Ladies and Gentlemen:

I am submitting this letter on behalf of my client, June Guidotti. Please consider this letter and include the following comments and recommendations in the meeting record.

It's hard to improve upon perfection. Attorney Kelly Smith's letter, dated 12/8/2008, expressed almost every word I wanted to say. About the only thing lacking was ... an objection to a public entity siding with a private enterprise to take my client's land, or vested rights of her land, away from her. She has survived death of a family member, fires, vandalism, terrorist threats, nuisance, litter, dust, odor and bio-solids across her property from the landfill next door; trespassers, loss of water in her pond, the landfill gasses; and the nastiest tasting water on this planet. Many of these things bear a direct relationship to the Landfill, which is not necessarily a great neighbor.

My client, June Guidotti, went so far as to sue (and prevail, I might add) Solano County. It was ordered by Judge Paul Beeman that Solano County must "reconsider" their certification of the EIR in accordance with CEQA and CEQA guidelines or to reconsider and/or modify the conditional use permit prior to any decision to proceed. I submit that these "fixes" have not yet been satisfied. Submission of an *addendum*, knowing it will only fail again is probably not the most efficient way to proceed.

An analogy I liken to what you are trying to accomplish is the K.I.S.S. system of Keep It Simple Stupid. Why don't you simply fix what was ordered and then prepare a NEW Environmental Impact Report, instead of publishing in the Daily Republic about a public meeting on an addendum? To also avoid a Hatfield & McCoy situation, I strongly urge you take other avenues of access to the landfill without the taking of more of my

RECEIVED
Solano County
Resource Management

DEC 03 2008

AM PM
7 8 9 10 11 12 1 2 3 4 5 6

client's property. She has already lost an easement of 16 1/2 feet because the landfill did not use the Amos & Andrews quarry road to the west of Emmington Road, but established a 32 foot wide commercial industrial road to the landfill. I am not going to allow anyone to take any more land or property rights from her without litigation.

It is incumbent upon the County to make the "fixes" and then prepare and submit to the public a new revised EIR that fully complies with CEQA.

Enclosed for the record are letters from 7/6/07, 8/20/07, 8/25/07, 11/30/07, and a map, which you probably should look at carefully. On the map, item #13 is shown as the Solano Garbage Company, but really part of #13 is my land. Solano Garbage Company and Ms. Guidotti's property is in the Potrero Hills, but the Potrero Hills Landfill is in the nearby canyon. Burning is not allowed in the canyon thus a power plant is not appropriate. Ms. Guidotti's land was previously identified as a site for a solid waste to energy plant which satisfied the original land use permit requirements. Solano Garbage Company actually had an option to lease a portion of the Guidotti Ranch for a few years after which the option was not renewed. Solano County did not challenge the failure of Solano Garbage Company to maintain the requisite site.

These items should be addressed in the Joint Technical Document and the Landfill Closure plan. These documents must be certified and made available to the public.

Finally, included as part of the record reference is made to all environmental laws (Federal, State, Local and County) and especially to Solano Superior Court Case Nos. FCS026779 and FCS026839 (Protect The Marsh). Also see enclosed a Complaint for Mandate from California Water Impact Network (C-WIN) and California Sportfishing Alliance (CSPA), Felix Smith (an individual).

Sincerely,

William S. Reistle

<http://deltacouncil.ca.gov/delta-council-members>

Delta Council Members

Created by the legislature in 2008, the Delta Stewardship Council is composed of members who represent different parts of the state and offer diverse expertise in fields such as agriculture, science, the environment, and public service. Of the seven, four are appointed by the Governor, one each by the Senate and Assembly, and the seventh is the Chair of the Delta Protection Commission.

The council's work is supported by an independent board of nationally and internationally prominent scientists.

Council members are:

Phil Isenberg

Chair of the Delta Stewardship Council. Previously, he served as a Sacramento City Council member from 1971-1974, Mayor of Sacramento from 1976-1982 and as a member of the California State Assembly representing portions of Sacramento, Contra Costa and San Joaquin Counties from 1982 to 1988. His state legislative district contained major parts of the Sacramento-San Joaquin Delta. His subject area focus as an elected official included land use planning, water and resource issues, state budget and fiscal matters, redevelopment reform and healthcare issues.

Isenberg holds a Doctor of Jurisprudence from the University of California, Berkeley Boalt Hall School of Law and a Bachelor of Art in Social Science and Government from California State University, Sacramento. He was in private practice and also served as President of Isenberg-O'Haren Government Relations from 2004 to February 2010. He is currently an inactive member of the California State Bar.

Isenberg served as chair of the California Marine Life Protection Act Blue Ribbon Task Force from 2004 to 2006 and served as chairman of the Delta Vision Blue Ribbon Task Force from 2007 to 2008. The recommendations of the Delta Vision Task Force provided much of the structure of the major water/delta policy changes adopted by the legislature in 2009 and signed into law by Governor Schwarzenegger.

He was appointed by Governor Schwarzenegger to a six year term on the Delta Stewardship Council, and elected Chair of the Council by his colleagues.

Randy Fiorini

Turlock, CA, has been managing partner at Fiorini Ranch since 1975. Fiorini Ranch, established in 1939, produces peaches, wine grapes, plums and walnuts.

He is past president and board member of the Association of California Water Agencies, past board president and director of Turlock Irrigation District and past president and board member of the California Farm Water Coalition.

Fiorini holds a Bachelor of Science in Food Science from California Polytechnic State University, San Luis Obispo. He was appointed to the Delta Stewardship Council in March 2010 by Governor Arnold Schwarzenegger.

More options

Created by the legislature in 2009, the Delta Stewardship Council is composed of members who represent different parts of the state and offer diverse expertise in fields such as agriculture, science, the environment, and public service. Of the seven, four are appointed by the Governor, one each by the Senate and Assembly, and the seventh is the Chair of the Delta Protection Commission.

The council's work is supported by an independent board of nationally and internationally prominent scientists.

Council members are:

Phil Isenberg

Chair of the Delta Stewardship Council. Previously, he served as a Sacramento City Council member from 1971-1974, Mayor of Sacramento from 1975-1982 and as a member of the California State Assembly representing portions of Sacramento, Contra Costa and San Joaquin Counties from 1982 to 1996. His state legislative district contained major parts of the Sacramento-San Joaquin Delta. His subject area focus as an elected official included land use planning, water and resource issues, state budget and fiscal matters, redevelopment reform and housing issues.

Isenberg holds a Doctor of Jurisprudence from the University of California, Berkeley Boalt Hall School of Law and a Bachelor of Art in Social Science and Government from California State University, Sacramento. He was in private practice and also served as President of Isenberg-O'Hare Government Relations from 2004 to February 2010. He is currently an inactive member of the California State Bar.

Isenberg served as chair of the California Marine Life Protection Act Blue Ribbon Task Force from 2004 to 2006 and served as chairman of the Delta Vision Blue Ribbon Task Force from 2007 to 2008. The recommendations of the Delta Vision Task Force provided much of the structure of the major water/Delta policy changes adopted by the legislature in 2009 and signed into law by Governor Schwarzenegger.

He was appointed by Governor Schwarzenegger to a six year term on the Delta Stewardship Council, and elected Chair of the Council by his colleagues.

Randy Fiorini

Turlock, CA, has been managing partner of Fiorini Ranch since 1975. Fiorini Ranch, established in 1939, produces peaches, wine grapes, almonds and walnuts.

He is past president and board member of the Association of California Water Agencies, past board president and director of Turlock Irrigation District and past president and board member of the California Farm Water Coalition.

Fiorini holds a Bachelor of Science in Fruit Science from California Polytechnic State University, San Luis Obispo. He was appointed to the Delta Stewardship Council in March 2010 by Governor Arnold Schwarzenegger.
